

Free Webinar – Privacy Enhancing Technologies

Today millions of users use online that use and transfer data that contains personal information. One way to protect privacy is to use Privacy Enhancing Technologies (PETs). These technologies facilitate management and communication of personal information over the digital medium by different means e.g. hiding identity, encrypting traffic, management of web-based advertisements!

Ali Padyab, a researcher from Privacy Flag will demonstrate some of tools available for public users and shows how freely available tools can protect daily Internet activities against privacy breaches!

 Time: 18th of October 10:00 -10:30 CET
